

Solution Architecture

Date	07 July 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides the user interface to collect applicant details and display prediction results.	<i>HTML5, CSS3, Flask Templates</i>
API Gateway	Flask routes (app.py) receive user requests, validate input, and forward data to the prediction model.	Flask
Microservices	Handles data preprocessing, label encoding, model prediction, and result generation. <i>(Implemented as application modules, not separate microservices.)</i>	Python, Scikit-learn, NumPy, Pandas
Database	Stores datasets, trained machine learning model, and label encoders used for prediction.	CSV Files, Pickle (best_model.pkl, label_encoders.pkl)
