Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes/ No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA

9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
CreditCardApprovalPrediction/
|
|— 1. Brainstorming & Ideation/
|— 2. Requirement Analysis/
|— 3. Project Design Phase/
|— 4. Project Planning Phase/
|— 5. Project Development Phase/
|   |— Dataset/
|   |— Model/
|   |— Notebook/
|   |— static/
|   |— templates/
|   |— app.py
|   |— requirements.txt
|   |— Procfile
|   |— README.md
|   |— CreditCardPerformanceTest.jmx
|
|— 6. Project Testing/
|— 7. Project Documentation/
|— 8. Project Demonstration/
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://credit-card-approval-prediction-9e3z.onrender.com
Login Credentials (Demo)	Not Required (No Authentication Required)
Platform / Hosting Provider	Render
Repository Link	https://github.com/Roopa-Reddy-07/Credit_Card_Approval_Prediction
Demo Video Link	https://drive.google.com/file/d/1V7Hf6Cqh8iQfN6JMIgBuoy64FgJgx8PM/view?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Download or clone the project from the GitHub repository.
2. Open the project in a Python-supported IDE or terminal.
3. Install the required dependencies using:
pip install -r requirements.txt
4. Run the Flask application:
python app.py
5. Open a web browser and visit:
http://127.0.0.1:5000
6. Enter the applicant details and click **Predict** to view the credit card approval result.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Initial loading of the deployed application may take 30–60 seconds due to Render free-tier server sleep.	Wait for the server to wake up; subsequent requests load faster.
2	The prediction accuracy depends on the quality and validity of the input data.	Ensure all required fields are entered correctly before prediction.
3	The model is trained on the available dataset and may not fully generalize to all real-world credit card applications.	The model can be retrained periodically using updated datasets to improve performance.
