

Coding & Solution

Date	07 July 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/Roopa-Reddy-07/Credit_Card_Approval_Prediction
Programming Language(s)	Python, HTML5, CSS3
Framework(s) Used	Flask, Scikit-learn

Key Features Implemented	• Data preprocessing and feature engineering • Credit card approval prediction using Logistic Regression • Model comparison and evaluation
	• Flask-based web application • User-friendly prediction interface
Pending / Incomplete Features	• Cloud deployment (future enhancement) • User authentication • Database integration
Setup / Run Instructions	1. Clone/download the project repository. 2. Install the required libraries using requirements.txt. 3. Run python app.py. 4. Open the Flask URL in a web browser. 5. Enter applicant details and click Predict to view the result.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project successfully implements a Machine Learning-based Credit Card Approval Prediction System using Logistic Regression with an accuracy of 98.31%. The solution includes data preprocessing, model training and evaluation, a Flask web application for real-time prediction, and version control using Git and GitHub. The application is designed to be scalable, maintainable, and can be further enhanced with cloud deployment and database integration.
